

SERVICE BRIEF

Digital Security Camera Systems

We'll take the headache out of choosing a surveillance system for your business.

Keep An Eye On Your Business With The Help Of Security Cameras From GeekBox IT

Surveillance systems can provide you with a record of the comings and going to your business, approved or otherwise. You need to pick the right one for your needs.

Choosing from the vast amount of surveillance systems available on the market today can be overwhelming to anyone. There's different brands, sizes, resolutions along with a lot of options to choose from like motion and light detection.

You want to make sure that when choosing a digital surveillance option that you're not wasting money by purchasing unnecessary equipment, while at the same time, not inhibiting your ability to gain the security you are after. As with many of your technology needs, GeekBox IT can assist you with this. We've had enough experience in the industry to properly filter through the do's and don'ts, while still keeping future expansion in mind.

Technology At Its Best

Don't risk your organization's security with antiquated technology.

While CCTV cameras were good when they first came out, they are now a thing of the past. They

are rigorously known for their poor quality, especially the farther away the camera is from the object they are capturing. It was fortunate to get a decent face shot, if ever you needed it, because the resolution in video capture was so shoddy.

With today's advancements in digital photography, blurriness is a thing of the past. Some high-resolution cameras are able to see the text on a receipt from 30 feet away, if not better. With a Digital Surveillance solution from GeekBox IT, you'll never have to worry about not being able to "see" the scene clearly. It will be as if you were there, watching it happen.

Control Over Your Security

Gain complete control over your surveillance and be able to access it from anywhere.

How would you like to eliminate the need to purchase and store your video tapes on a continual basis? Digital cameras and digital video recorders (DVR) take tapes right out of the equation. The digital cameras are constantly on and broadcasting to the DVR. The DVR sends its recordings over your secure network to your server where the files are then stored.

With built in analytics, your DVR can be programmed to only record when certain events are triggered such as an alarm goes off, motion is detected, specific times etc. This allows you the complete control over the image, and thus, the file size. You can also log into the system and access live footage remotely on your mobile device. GeekBox IT will be sure to go over all the options and consult with you on best practices for your business.

Features

- Improved image quality provides a better view of what goes on, allowing you to capture critical information
- Depending on the camera, there may be additional options like motion and light detection
- Footage is stored directly to your network, eliminating the need to procure and swap out tapes
- Analytics allow customizable recording options, based on circumstances and events
- Accessible via mobile device for review from anywhere

Benefits

- Improved camera quality means better, less blurry footage that gives you a better view of the situation.
- Eliminating the need of purchasing and storing tapes means cost savings in both procurement and storage.
- Analytics allow data to be collect when it needs to be, with programmable conditions activating the recording.
- Mobile capabilities keep you in the know, at all times.
